

Checklist: Is your operation ready for AI?

If you answer “no” to several, the first step probably isn't AI but getting the process in order. That counts as progress too.

— PROCESS

- ☐ Can you describe the process you want to improve, step by step, end to end?
- ☐ Do you know roughly how much time or money it takes today?
- ☐ Is it done the same way every time, or does it depend on who's doing it?

— DATA

- ☐ Is the information it relies on written down somewhere (systems, documents, manuals), not just in someone's head?
- ☐ Can you get to that data without asking for favors or copying it by hand?
- ☐ Do you know which data is sensitive and who's allowed to see it?

— TEAM

- ☐ Is there someone who owns the process and can tell whether a solution actually works?
- ☐ Is the team that will use it involved from the start?

— BUSINESS

- ☐ Are you clear on what would change if the process worked better (response times, errors, sales)?
- ☐ Have you decided how you'll measure whether it worked?
- ☐ Do you have a monthly budget to run the solution, not just to build it?

— RISK

- ☐ Do you know what happens when the AI gets it wrong, and who reviews the unclear cases?

More than three “no”s? Let's start with a diagnosis. Write to me: pablo@nexuralabs.agency
